

A man with short brown hair, wearing an orange polo shirt, is seen from the back and side, pointing his right index finger towards a row of server racks in a data center. The racks are dark and have some green indicator lights. The background is slightly blurred, showing more of the server aisle.

The Sustainable and Responsible Data Center Ecosystem

Kajaani – Home for the sustainable data

customer service

Granlund

Granlund in Kajaani

- CSC selected Kajaani for their next HPC location ~ 2009
- Design for the Rata building put on hold ~2010
- New plans to Varasto building and new start ~2010
- CSC first hand over ~ 2012
- Herman IT kicking off their project with IBM ~ 2012
- A lot of different interest and concept plans
- Digiplex, ECMWF, etc.
- New HPC – generations
- LUMI / EURO HPC project 2018...2022
- Granlund founded office in Kajaani 2020
- 2022 Redeve takes over Renforsinranta business park
- 2020... many conceptual designs which Borealis have been realized
- 2023 XTX starts to prepare their project in Kajaani
- 2024 Borealis kick-off their construction
- New projects are about to come...

The importance of data center industry

The race for data centers is no longer just about technology.

- It's about territory, energy—and power.
- Across the globe—from the USA to the Nordics, Saudi to Japan—governments are securing AI-ready land with near-military urgency.
- Why? Because this isn't simply about building data centers.
- It's about:
 - dominating the digital backbone of the 21st century.
 - energy leverage, infrastructure resilience, and economic sovereignty.
- **Land, power, and fiber are the new strategic assets.**
- The infrastructure behind AI is becoming as crucial as oil fields once were.

”

The oil of the last century
was buried underground.
The oil of this one?
It flows through cables,
consumes megawatts, and
is cooled in hyperscale.

in Finland:

Confirmed investments
10 mrdeur / 1000 mw

Potential investments
30 mrdeur / 3000 mw

Sustainable datacenter

- Construction and operating sustainably
 - Energy efficiency
 - Reducing whole life cycle carbon impacts including material embodied impacts in supply chain
 - Energy re-use
 - All necessary environmental studies for the biodiversity etc.
 - Low water consumption and emissions overall
- Going local
 - working closely with the local community
 - collaborative approach with local organisations to provide tangible benefits to region
 - using exclusively local/Finnish contractors for the construction of the first data center.

Sustainable datacenter:

BIG THEMES just about to come

- Ecological compensation
- Ensure the sustainability in the entire production and supply chain
- Circular Economy and Deconstruction
- Climate Adaptation and Resilience
- Social Sustainability and Health
- Digital Tools for Sustainability Management
- Energy-Positive and Resource-Positive Buildings

Sustainable Goals:

Balance economic growth, social inclusion, and environmental protection

Promote long-term peace and prosperity

Create a blueprint for global cooperation and sustainable futures

KAJAANI RIVER SUSTAINABLE DATA PARK IPR ON AI
